LCD/Plasma Wall Mounts

Canon Eos Digital Rebel Xt With 18-55mm Lens - Black

Hanging a flat-panel TV on the wall is a good option for having enough space in your living room, but it's not that easy as one might think of. A number of things need to be considered, say cabling and the weight of the flat-panel. The [Evo System](#) from Vantage Point is a new modular shelving system that helps you mount your flat-panel TV on any wall. It offers complete solution for mounting flat panel televisions, rear projection televisions and all electronic components onto the wall while freeing up valuable floor space. Consisting of an aluminum frame and track system, it has a frame that hangs on autonomously mounted rails and extends 4 inches from the wall creating a hollow space for power and wiring distribution.

The looks will best suit your decor as the removable real wood veneer panels come in varied finishes, including Maple, Cherry, Walnut, Black Ash and Espresso. The panels can be removed at any time to allow access to wiring and outlets. The pricing for Evo System starts at US \$725.
