

CES 2007: Stylish EVO System Eliminates the Need to Cut Holes into Walls for Electrical Wiring

Published by Chip Chick November 9th, 2006 in Web/Tech.

The EVO System is a very stylish and modern [space saving](#) solution that allows you to strategically place your display and other electronics in an attractive way. The EVO System is strong enough to support large plasma and [LCD displays](#), but what makes this feature extra special is that fact that you can easily attach and install your display on to the EVO System all by yourself, without having to spend money on a special installation. Plus, being able to install it on your own means that you can move it around on the [EVO System](#) whenever you want - so you don't have to worry about crushing another hole in the wall because you would like the Plasma to be placed a few inches higher or lower. Also, the smart wooden panels are

able to conceal all of your electric wiring so that you don't have to cut open your wall ever. of a sturdy aluminum frame that is available in 3 finishes that can expand to multiple configurations. You can also customize the EVO System's wood
